

Herbal Container Workshop

Imagine stepping just a few feet from your kitchen to pluck fresh, aromatic herbs for your meals. That dream can become a reality with our hands-on workshop, "Create Your Own Herbal Planter!"

This interactive session is designed to empower you with the knowledge and tools to select, plant, and nurture a variety of herbs in a container that you'll take home to enjoy.

Here are some tips that will be shared during this upcoming event.

Reading Your Seed Packet

The seed packet will contain the information that you need, including

- Planting temperature
- Planting depth
- Days to seedlings
- Watering needs
- Days to harvest

Steps to Prepare

Step One: Prep the Soil

We like to put my potting soil in a bucket or garden trug so that I can add water to get the moisture right before I seed.

Step Two: Fill your Planting Tray

Fill your plant cells or container almost to the top, leaving enough space to add seed and additional soil as needed.

Herbal Container Workshop

Steps to Prepare

Step Three: Add your Seeds!

Be sure to follow the planting depth instructions on the packet

Step Four: Add Additional Water

We like to use the spray bottle here, so as not to disturb delicate seeds.

Step Five: Place in a Warm, Lighted Area

Continue to check for moisture, do not allow soil to dry out.

Care Through the Summer

To give the plants enough room to grow, you can transplant them outside once the danger of frost has passed. (usually mid-April)

Or you can transplant into a larger planter to keep on your windowsill or on a patio.

To learn about **HARVESTING, USING YOUR HERBS & more**, register today for the workshop on **Wednesday, March 13, 10:00 AM - 12:00 PM.**
